Celebrating Organic – Comprehension – Solutions

1. September
2. Australian Organic Awareness Month celebrates certified organic products across all industries.
3. For a product to be certified organic it must be grown or manufactured without the use of nasty **synthetic pesticides, herbicides, growth hormones or antibiotics**.
4. Genetically modified
5. c – 3 years
6. Annually (or every year)
7. All answers should be circled
8. Companion planting – selecting plants that help each other's growth or protect each other from pests and planting them close together.

Minimal tillage – making sure that the soil is not agitated (dug, stirred or overturned) too much.

Crop rotation – rotating (changing) the type of crop planted in a single area to maintain soil health, control weeds and reduce pests.
9. Organic food is good for us because it is made without synthetic colourings, preservatives, additives or genetically modified ingredients.
10. The 'Bud' logo.
